

PF-2-92

Panel fixing system

The Brital Panel Fixing System is primarily designed for use with composite aluminium panels to provide an architecturally light but robust panel system. The Brital aluminium sections are from extruded aluminium. The vertical channel support section is formed from a robust extruded aluminium channel section, which is fixed to the concrete wall via purpose designed fixing brackets & anchors. The sections are supported at the ends by means of extruded aluminium brackets, which are screw fixed to the vertical and the adjacent structure. Intermediate fixings are provide using the same bracket sections.
